Bob,

Thanks for your response. Western Wireless is ready to test its Phase II service but given the situation with the equipment we will wait until further notice from you before we attempt to schedule a time and date to test the service. Please be sure and let us know when things are ready to go on your end and we'll get some of our folks out there to test the service immediately afterwards. Thanks for your cooperation and flexibility.

Nathan,  
Although we are anxious to get phase II operational we are waiting for our mapping and 911 vendor to make the link displaying the callers location on our maps. We continue to make progress, although not at a pace I would have liked. We will not hold Western Wireless to the 6 month timeline, and are willing to extend it by 60 days at this time. We fully expect this to be adequate for both Emergi Tech and Geo Comm to coordinate efforts and accomplish this task.

Bob,

I understand that Shelby County, IA is still awaiting certain equipment upgrades necessary to move forward with the wireless E911 Phase II deployment for your PSAP. Western Wireless d/b/a Cellular One is ready to test and turn up service as soon as this upgrade is finished. However, I am concerned that we are quickly approaching the end of our six-month deadline for completing the deployment. I'd like to propose that we agree to give ourselves more time beyond the FCC's six-month timeline in which this deployment can be finished. We'll continue to mutually work this deployment to completion in good faith. Can you agree to an extension of time? If so, I have attached a letter agreement that I'd suggest we sign so that we can memorialize this arrangement. Please take a look at the attachment and let me know if you have any questions. Otherwise, please print it and mail or fax a copy to me. I will return a copy to you. Thanks.
